

With CRFTrack you'll reduce time and costs managing CRFs during clinical trials and while preparing for electronic submissions. You'll get faster results from global collaboration and powerful solutions that surpass submission requirements. From beginning to end, you'll be glad you have CRFTrack to solve all your complex challenges.

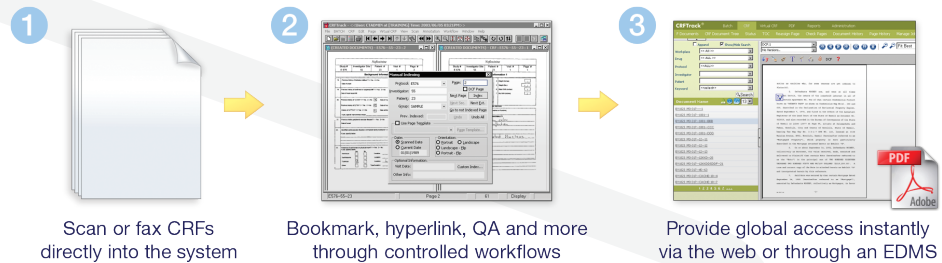

Get your CRF lifecycle on the right track.

Quickly Scan and Index CRFs

Scanning CRFs into CRFTrack saves time and is easy to use. You'll benefit from the direct electronic conversion with greater flexibility to organize and keep track of all your CRFs. In addition, you'll be able to perform QA and QC processes effortlessly.

Get Your CRFs on Track

CRFTrack allows you to perform multiple tasks simultaneously, reducing clinical trial processing time. Offering parallel workflow task processing (such as indexing, first and second pass Data Entry, Data Review, CRA Review, electronic submission preparation, quality assurance reporting and archiving), you can securely route pages across the entire organization assigning and/or restricting access to CRFs, documents and pages as necessary. In addition, CRFs can be archived in CRFTrack or uploaded to EDMS.

Remote Access Anywhere in the World

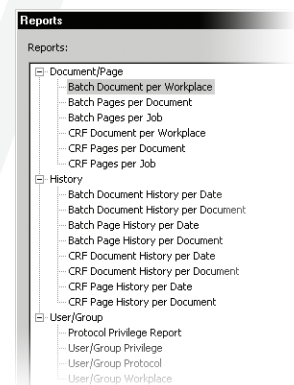

Easily create and manage a CRF web portal for both your in-house and remote users. CRA's, Clinical Trial Monitors, Investigators and other key team members who need access to the CRF will be able to review and verify CRF collection, view and resolve queries, and make on-the-spot decisions.

Powerful CRF Management

A vital part of CRF management, CRFTrack provides necessary features, such as across-patient searches, page history, audit trail mapping, missing/containing pages and many more out-of-the-box reports, along with the ability to create custom reports.

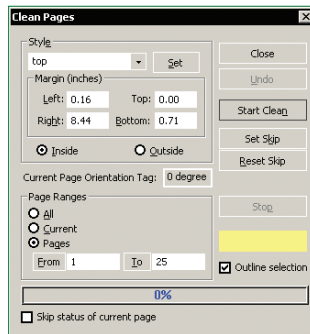

Exceed Electronic CRF Submission Requirements

At your fingertips is the most powerful and flexible PDF conversion and formatting tool available, guaranteeing that your CRFs meet and exceed electronic CRF submission requirements and standards.

Enhance the Quality of Your PDFs

Dramatically improve the quality and integrity of your scanned documents. On-the-fly Optical Character Recognition makes editing scanned images and text a snap. Quickly create custom filters, deskew any crooked image-based document, and do much more to improve the readability and reliability of your PDFs.

Get Faster Results with Split Screen Data Entry

To streamline clinical operations as much as possible, split-screen data entry integration with programs such as Oracle Clinical and ClinTrial allow for greater speed and quality during first and second pass data entry.

Convenient EDMS Integration

CRFs that have been converted into PDF files can be uploaded into an EDMS, as the central document repository. They can also be converted on-the-fly during uploading. EDMS users can then access CRF pages anywhere and anytime through the EDMS interface.
